ZCAMS Z-SAD And Invoice Tutorial

How to generate a Z-SAD, create Service Fee Only and Full Settlement invoices, and complete payment flow.

Document	ZCAMS Z-SAD And Invoice Tutorial
Audience	Declarants, Company Admins, Super Admins, support teams, and implementation trainers
Generated	29 May 2026 09:25 UTC
Theme	ZCAMS green, gold, orange, and light operational panels

This document uses designed visual panels instead of live screenshots. The panels are intentionally high-level so they can be shared with users, ZAFFA stakeholders, and integration partners without exposing live operational data.

1. End-to-End Clearance Flow

The Z-SAD and invoice flow begins when a BL is uploaded or captured. ZCAMS reviews the BL, issues one active Z-SAD, calculates GN 83 charges, creates a CapitalPay invoice, and uses payment settlement rules to release cargo.

1. BL Upload	2. Review BL	3. Issue Z-SAD	4. Invoice Type	5. CapitalPay	6. Release
--------------	--------------	----------------	-----------------	---------------	------------

ZCAMS Customs Journey	Uploaded BL status	Ready Z-SAD	Not generated Invoice
Reviewed BL: Z-SAD And Invoice Controls	Designed panel showing the core controls used during Z-SAD and invoice generation.		
	Review & Issue Z-SAD Choose Service Fee Only Choose Full Settlement Pay Now / Generate and Share		

2. Manual Z-SAD Generation

Step	User action	System result
1	Open BLs and upload or capture the Bill of Lading.	The BL is saved with route, transport, consignee, cargo, and GN 83 category fields.
2	Open Reviewed BL and find the BL under awaiting review.	The BL is ready for compliance review.
3	Click Review & Issue Z-SAD.	ZCAMS creates a reviewed BL record and one active Z-SAD number.
4	Confirm the BL appears under Active Reviewed BLs.	The record is ready for Service Fee or Full Settlement billing.
5	Use Replace BL only if the document must be corrected.	Old Z-SAD and open invoices are retired according to workflow rules.

Important: ZCAMS is designed around one active Z-SAD per reviewed BL. Superseded Z-SADs stay in history for audit.

3. Invoice Type Decision

Invoice type	When to use it	GN 83 calculation	Release behavior
Service Fee Only	Use when the platform should collect the agency service fee only.	Admin fee is 20% of the standard minimum. VAT is 16% on the admin fee only.	Payment moves the reviewed BL to release-pending; release can then be issued.
Full Settlement	Use when the platform should collect the full customs settlement amount through the invoice.	Standard minimum + 20% admin fee + VAT on the combined subtotal.	Payment can complete the cargo release flow automatically.

4. Service Fee Only Invoice

Step	Action	Expected outcome
1	Click Service Fee Only from the reviewed BL invoice action.	The invoice modal opens with Service Fee selected.
2	Review the GN 83 minimum, admin fee, VAT, and total.	The user understands the amount being charged.
3	Enter importer email/phone if sharing is required.	ZCAMS can send the invoice to the importer.
4	Click Generate & Share Invoice or Pay Now.	ZCAMS creates the invoice and CapitalPay reference.
5	Settle the invoice after payment confirmation.	Shipment moves toward cargo release.

ZCAMS Customs Journey	Informational Std minimum	20% Admin fee	16% of admin VAT
Service Fee Only Invoice	Designed panel for the service-fee workflow.		

	Review amount Generate & Share Pay Now Track settlement
--	--

5. Full Settlement Invoice

Step	Action	Expected outcome
1	Click Full Settlement from the reviewed BL invoice action.	The invoice modal opens with beneficiary fields.
2	Confirm the settlement amount is at least the GN 83 minimum.	ZCAMS prevents under-billing.
3	Enter beneficiary name, bank, and account number.	The settlement instructions appear on the invoice PDF.
4	Click Generate & Share Invoice or Pay Now.	ZCAMS creates CapitalPay invoice and checkout link.
5	Settle the invoice once payment is confirmed.	Cargo release can complete automatically for the full settlement path.

ZCAMS Customs Journey	Charged Std amount	20% Admin	16% subtotal VAT
Full Settlement Invoice	Designed panel for the full-settlement workflow.		
	Enter beneficiary bank Confirm settlement Generate & Share Pay Now		

6. Agentic Mode Shortcut

Agentic Mode follows the same business rules but guides the user through upload, extraction, human validation, Z-SAD generation, invoice creation, Pay Now, and optional client sharing inside one modal.

Checkpoint	Human confirmation	System action
Upload	Confirm the selected BL file.	OCR extracts available BL/customs fields.
Five values	Confirm BL number, TIN, gross weight, cargo count, and invoice type.	ZCAMS validates core workflow inputs.
Run workflow	Approve the run after values are confirmed.	BL, Z-SAD, and invoice are generated.
Pay / Share	Click Pay Now or Approve and send to client.	CapitalPay reference and amount are shown after the click.

7. Operational Rules To Remember

- Do not issue a new Z-SAD unless the BL genuinely needs correction or replacement.
- Service Fee Only and Full Settlement invoices use different VAT bases.
- Pay Now opens CapitalPay checkout; Generate & Share sends the invoice to the importer.
- Payment status drives release status, so settlement should be updated carefully.
